

Keystone New Customer Announcement

Dinwiddie County School District Joins the Keystone User Family Dinwiddie, Virginia—Spring 2007

Keystone Information Systems, Inc. is pleased to announce a new client relationship with the **Dinwiddie County School District** in Virginia. On May 7, 2007, Keystone contracted with Dinwiddie to provide an integrated financial accounting system.

Dinwiddie County is located roughly 25 miles south of the City of Richmond and borders both Prince George and Chesterfield counties. The district educates roughly 4,700 students in grades K-12 with the assistance of 700+ faculty and staff county-wide. Currently the County is in the process of building both a new elementary and high school due to be operational in 2008.

Dinwiddie will be implementing several modules from the *SKools*[™] product line including the core financial, requisitions along with *KeyNet* for web access, payroll, employee information, applicant tracking, leave/attendance tracking, cost projections, substitute tracking, position control, and *KeyNet* for employee web access.

Keystone would like to extend a public welcome and “thank you” to Dinwiddie County Public Schools and in particular to **Lynne Venter**, Executive Director for Fiscal Operations and **Timothy Ampy**, Director of Technology who will be key individuals in this implementation. We also wish to thank all the *SKools*[™] clients for many positive and supportive references, especially **Pittsylvania County Public Schools** for their consistent support and willingness to host site visits.

Founded in 1975, Keystone Information Systems, Inc. develops comprehensive application software solutions for local governments and public school districts, with installs in 14 states.
